Glyphicons

Available glyphs

Includes 200 glyphs in font format from the Glyphicon Halfings set. Glyphicons (http://glyphicons.com/) Halfings are normally not available for free, but their creator has made them available for Bootstrap free of cost. As a thank you, we only ask that you to incl link back to Glyphicons (http://glyphicons.com/) whenever possible.

How to use

For performance reasons, all icons require a base class and individual icon class. To use, place the following code just about anywhere. Be sure to leave a space between the icon and text for proper padding.

Don't mix with other components

Icon classes cannot be combined with other elements. They are designed to be standalone elements.

```
<span class="glyphicon glyphicon-search"></span>
```

Examples

Use them in buttons, button groups for a toolbar, navigation, or prepended form inputs.

EXAMPLE

★ Star

★ Star

★ Star

★ Star

```
<button type="button" class="btn btn-default btn-lg">  
  <span class="glyphicon glyphicon-star"></span> Star  
</button>
```

Dropdowns

Toggleable, contextual menu for displaying lists of links. Made interactive with the dropdown JavaScript plugin (`../javascript/#dropdowns`).

Example

Wrap the dropdown's trigger and the dropdown menu within `.dropdown`, or another element that declares `position: relative`. Then add the menu's HTML.

EXAMPLE

Action
Another action
Something else here

Separated link

```
<div class="dropdown">
  <button class="btn dropdown-toggle sr-only" type="button" id="dropdownMenu1" data-toggle="dropdown">
    Dropdown
    <span class="caret"></span>
  </button>
  <ul class="dropdown-menu" role="menu" aria-labelledby="dropdownMenu1">
    <li role="presentation"><a role="menuitem" tabindex="-1" href="#">Action</a></li>
    <li role="presentation"><a role="menuitem" tabindex="-1" href="#">Another action</a></li>
    <li role="presentation"><a role="menuitem" tabindex="-1" href="#">Something else here</a></li>
    <li role="presentation" class="divider"></li>
    <li role="presentation"><a role="menuitem" tabindex="-1" href="#">Separated link</a></li>
  </ul>
</div>
```

Alignment options

Add `.pull-right` to a `.dropdown-menu` to right align the dropdown menu.

```
<ul class="dropdown-menu pull-right" role="menu" aria-labelledby="dLabel">
  ...
</ul>
```

Headers

Add a header to label sections of actions in any dropdown menu.

EXAMPLE

Dropdown header
Action
Another action
Something else here

Dropdown header
Separated link

```
<ul class="dropdown-menu" role="menu" aria-labelledby="dropdownMenu2">
  <li role="presentation" class="dropdown-header">Dropdown header</li>
  ...
  <li role="presentation" class="divider"></li>
  <li role="presentation" class="dropdown-header">Dropdown header</li>
  ...
</ul>
```

Disabled menu items

Add `.disabled` to a `` in the dropdown to disable the link.

EXAMPLE

Regular link
Disabled link
Another link

```
<ul class="dropdown-menu" role="menu" aria-labelledby="dropdownMenu3">
  <li role="presentation"><a role="menuitem" tabindex="-1" href="#">Regular link</a></li>
  <li role="presentation" class="disabled"><a role="menuitem" tabindex="-1" href="#">Disabled link</a></li>
  <li role="presentation"><a role="menuitem" tabindex="-1" href="#">Another link</a></li>
</ul>
```

Button groups

Group a series of buttons together on a single line with the button group. Add on optional JavaScript radio and checkbox style behavior with our buttons plugin ([../javascript/#button](#)

Tooltips & popovers in button groups require special setting

When using tooltips or popovers on elements within a `.btn-group`, you'll have to specify the option `container: 'body'` to avoid unwanted side effects (such as the element growing wider and/or losing its rounded corners when the tooltip or popover triggered).

Basic example

Wrap a series of buttons with `.btn` in `.btn-group`.

EXAMPLE

Left

Middle

Right

```
<div class="btn-group">
  <button type="button" class="btn btn-default">Left</button>
  <button type="button" class="btn btn-default">Middle</button>
  <button type="button" class="btn btn-default">Right</button>
</div>
```

Button toolbar

Combine sets of `<div class="btn-group">` into a `<div class="btn-toolbar">` for more complex components.

EXAMPLE

1234

5678

```
<div class="btn-toolbar" role="toolbar">
  <div class="btn-group">...</div>
  <div class="btn-group">...</div>
  <div class="btn-group">...</div>
</div>
```

Sizing

Instead of applying button sizing classes to every button in a group, just add `.btn-group-*` to the `.btn-group`.

EXAMPLE

Left

Middle

Right

Left

Middle

Right

Left

Middle

Right

Left

Middle

Right

```
<div class="btn-group btn-group-lg">...</div>
<div class="btn-group">...</div>
<div class="btn-group btn-group-sm">...</div>
<div class="btn-group btn-group-xs">...</div>
```

Nesting

Place a `.btn-group` within another `.btn-group` when you want dropdown menus mixed with a series of buttons.

EXAMPLE

1

2

Dropdown ▾

```
<div class="btn-group">
  <button type="button" class="btn btn-default">1</button>
  <button type="button" class="btn btn-default">2</button>

  <div class="btn-group">
    <button type="button" class="btn btn-default dropdown-toggle" data-toggle="dropdown">
      Dropdown
    <span class="caret"></span>
    </button>
    <ul class="dropdown-menu">
      <li><a href="#">Dropdown link</a></li>
      <li><a href="#">Dropdown link</a></li>
    </ul>
    </div>
  </div>
</div>
```

Vertical variation

Make a set of buttons appear vertically stacked rather than horizontally.

EXAMPLE

Button

Button

Dropdown ▾

Button

Button

Dropdown ▾

Dropdown ▾

Dropdown ▾

```
<div class="btn-group-vertical">
  ...
</div>
```

Justified link variation

Make a group of buttons stretch at the same size to span the entire width of its parent. Also works with button dropdowns within a button group.

Element-specific usage

This only works with `<a>` elements as the `<button>` doesn't pick up the styles we use to justify content (some `display: table-cell; -fu`).

EXAMPLE

Left

Middle

Right

Left

Middle

Right dropdown ▾

```
<div class="btn-group btn-group-justified">
  ...
</div>
```

Button dropdowns

Use any button to trigger a dropdown menu by placing it within a `.btn-group` and provide the proper menu markup.

Plugin dependency

Button dropdowns require the dropdown plugin (`../javascript/#dropdowns`) to be included in your version of Bootstrap.

Single button dropdowns

Turn a button into a dropdown toggle with some basic markup changes.

EXAMPLE

```
<!-- Single button -->
<div class="btn-group">
  <button type="button" class="btn btn-default dropdown-toggle" data-toggle="dropdown">
    Action <span class="caret"></span>
  </button>
  <ul class="dropdown-menu" role="menu">
    <li><a href="#">Action</a></li>
    <li><a href="#">Another action</a></li>
    <li><a href="#">Something else here</a></li>
    <li class="divider"></li>
    <li><a href="#">Separated link</a></li>
  </ul>
</div>
```

Split button dropdowns

Similarly, create split button dropdowns with the same markup changes, only with a separate button.

EXAMPLE

```
<!-- Split button -->
<div class="btn-group">
  <button type="button" class="btn btn-danger">Action</button>
  <button type="button" class="btn btn-danger dropdown-toggle" data-toggle="dropdown">
    <span class="caret"></span>
    <span class="sr-only">Toggle Dropdown</span>
  </button>
  <ul class="dropdown-menu" role="menu">
    <li><a href="#">Action</a></li>
    <li><a href="#">Another action</a></li>
    <li><a href="#">Something else here</a></li>
    <li class="divider"></li>
    <li><a href="#">Separated link</a></li>
  </ul>
</div>
```

Sizing

Button dropdowns work with buttons of all sizes.

EXAMPLE

```
<!-- Large button group -->
<div class="btn-group">
  <button class="btn btn-default btn-lg dropdown-toggle" type="button" data-toggle="dropdown">
    Large button <span class="caret"></span>
  </button>
  <ul class="dropdown-menu">
    ...
  </ul>
</div>

<!-- Small button group -->
<div class="btn-group">
  <button class="btn btn-default btn-sm dropdown-toggle" type="button" data-toggle="dropdown">
    Small button <span class="caret"></span>
  </button>
  <ul class="dropdown-menu">
    ...
  </ul>
</div>

<!-- Extra small button group -->
<div class="btn-group">
  <button class="btn btn-default btn-xs dropdown-toggle" type="button" data-toggle="dropdown">
    Extra small button <span class="caret"></span>
  </button>
  <ul class="dropdown-menu">
    ...
  </ul>
</div>
```

Dropup variation

Trigger dropdown menus above elements by adding `.dropup` to the parent.

EXAMPLE

```
<div class="btn-group dropup">
  <button type="button" class="btn btn-default">Dropup</button>
  <button type="button" class="btn btn-default dropdown-toggle" data-toggle="dropdown">
    <span class="caret"></span>
    <span class="sr-only">Toggle Dropdown</span>
  </button>
  <ul class="dropdown-menu">
    <!-- Dropdown menu links -->
  </ul>
</div>
```

Input groups

Extend form controls by adding text or buttons before, after, or on both sides of any text-based input. Use `.input-group` with an `.input-group-addon` to prepend or append elements to a `.form-control`.

Cross-browser compatibility

Avoid using `<select>` elements here as they cannot be fully styled in WebKit browsers.

Tooltips & popovers in input groups require special setting

When using tooltips or popovers on elements within an `.input-group`, you'll have to specify the option `container: 'body'` to avoid unwanted side effects (such as the element growing wider and/or losing its rounded corners when the tooltip or popover is triggered).

Don't mix with form groups

Do not apply input group classes directly to form groups. An input group is an isolated component.

Basic example

EXAMPLE

@	Username
---	----------

	.00
--	-----

\$.00
----	--	-----

```
<div class="input-group">
  <span class="input-group-addon">@</span>
  <input type="text" class="form-control" placeholder="Username">
</div>

<div class="input-group">
  <input type="text" class="form-control">
  <span class="input-group-addon">.00</span>
</div>

<div class="input-group">
  <span class="input-group-addon">$</span>
  <input type="text" class="form-control">
  <span class="input-group-addon">.00</span>
</div>
```

Sizing

Add the relative form sizing classes to the `.input-group` itself and contents within will automatically resize—no need for repeating the form control size classes on each element.

EXAMPLE

@	Username
---	----------

@	Username
---	----------

@	Username
---	----------

```
<div class="input-group input-group-lg">
  <span class="input-group-addon">@</span>
  <input type="text" class="form-control" placeholder="Username">
</div>

<div class="input-group">
  <span class="input-group-addon">@</span>
  <input type="text" class="form-control" placeholder="Username">
</div>

<div class="input-group input-group-sm">
  <span class="input-group-addon">@</span>
  <input type="text" class="form-control" placeholder="Username">
</div>
```

Checkboxes and radio addons

Place any checkbox or radio option within an input group's addon instead of text.

EXAMPLE

☐

☐

```
<div class="row">
  <div class="col-lg-6">
    <div class="input-group">
      <span class="input-group-addon">
        <input type="checkbox">
      </span>
      <input type="text" class="form-control">
    </div><!-- /input-group -->
  </div><!-- /.col-lg-6 -->
  <div class="col-lg-6">
    <div class="input-group">
      <span class="input-group-addon">
        <input type="radio">
      </span>
      <input type="text" class="form-control">
    </div><!-- /input-group -->
  </div><!-- /.col-lg-6 -->
</div><!-- /.row -->
```

Button addons

Buttons in input groups are a bit different and require one extra level of nesting. Instead of `.input-group-addon` , you'll need to `.input-group-btn` to wrap the buttons. This is required due to default browser styles that cannot be overridden.

EXAMPLE

Go!

Go

```
<div class="row">
  <div class="col-lg-6">
    <div class="input-group">
      <span class="input-group-btn">
        <button class="btn btn-default" type="button">Go!</button>
      </span>
      <input type="text" class="form-control">
    </div><!-- /input-group -->
  </div><!-- /.col-lg-6 -->
  <div class="col-lg-6">
    <div class="input-group">
      <input type="text" class="form-control">
      <span class="input-group-btn">
        <button class="btn btn-default" type="button">Go!</button>
      </span>
    </div><!-- /input-group -->
  </div><!-- /.col-lg-6 -->
</div><!-- /.row -->
```

Buttons with dropdowns

EXAMPLE

Action ▾

Action ▾

```
<div class="row">
  <div class="col-lg-6">
    <div class="input-group">
      <div class="input-group-btn">
        <button type="button" class="btn btn-default dropdown-toggle" data-toggle="dropdown">Action <span class="caret"></span></button>
        <ul class="dropdown-menu">
          <li><a href="#">Action</a></li>
          <li><a href="#">Another action</a></li>
          <li><a href="#">Something else here</a></li>
          <li class="divider"></li>
          <li><a href="#">Separated link</a></li>
        </ul>
      </div><!-- /btn-group -->
      <input type="text" class="form-control">
    </div><!-- /input-group -->
```

```
</div><!-- /.col-lg-6 -->
<div class="col-lg-6">
  <div class="input-group">
    <input type="text" class="form-control">
    <div class="input-group-btn">
      <button type="button" class="btn btn-default dropdown-toggle" data-toggle="dropdown">Action <span class="caret"></span></button>
      <ul class="dropdown-menu pull-right">
        <li><a href="#">Action</a></li>
        <li><a href="#">Another action</a></li>
        <li><a href="#">Something else here</a></li>
        <li class="divider"></li>
        <li><a href="#">Separated link</a></li>
      </ul>
    </div>
  </div><!-- /input-group -->
</div><!-- /.col-lg-6 -->
</div><!-- /.row -->
```

Segmented buttons

EXAMPLE

```
<div class="input-group">
  <div class="input-group-btn">
    <!-- Button and dropdown menu -->
  </div>
  <input type="text" class="form-control">
</div>

<div class="input-group">
  <input type="text" class="form-control">
  <div class="input-group-btn">
    <!-- Button and dropdown menu -->
  </div>
</div>
```

Navs

Navs available in Bootstrap have shared markup, starting with the base `.nav` class, as well as shared states. Swap modifier classes to switch between each style.

Tabs

Note the `.nav-tabs` class requires the `.nav` base class.

EXAMPLE

```
<ul class="nav nav-tabs">
  <li class="active"><a href="#">Home</a></li>
  <li><a href="#">Profile</a></li>
  <li><a href="#">Messages</a></li>
</ul>
```

Requires JavaScript tabs plugin

For tabs with tabbable areas, you must use the tabs JavaScript plugin (`./javascript/#tabs`).

Pills

Take that same HTML, but use `.nav-pills` instead:

EXAMPLE

Home

Profile

Messages

```
<ul class="nav nav-pills">
  <li class="active"><a href="#">Home</a></li>
  <li><a href="#">Profile</a></li>
  <li><a href="#">Messages</a></li>
</ul>
```

Pills are also vertically stackable. Just add `.nav-stacked`.

EXAMPLE

Home

Profile

Messages

```
<ul class="nav nav-pills nav-stacked">
  ...
</ul>
```

Justified

Easily make tabs or pills equal widths of their parent at screens wider than 768px with `.nav-justified`. On smaller screens, the links are stacked.

Safari and responsive justified navs

Safari exhibits a bug in which resizing your browser horizontally causes rendering errors in the justified nav that are cleared up refreshing. This bug is also shown in the justified nav example (`../examples/justified-nav/`).

EXAMPLE

Home

Profile

Messages

Home

Profile

Message

```
<ul class="nav nav-tabs nav-justified">
  ...
</ul>
<ul class="nav nav-pills nav-justified">
  ...
</ul>
```

Disabled links

For any nav component (tabs, pills, or list), add `.disabled` for **gray links and no hover effects**.

Link functionality not impacted

This class will only change the `<a>`'s appearance, not its functionality. Use custom JavaScript to disable links here.

EXAMPLE

Clickable link

Clickable link

Disabled link

```
<ul class="nav nav-pills">
  ...
  <li class="disabled"><a href="#">Disabled link</a></li>
  ...
</ul>
```

Using dropdowns

Add dropdown menus with a little extra HTML and the dropdowns JavaScript plugin ([../javascript/#dropdowns](#)).

Tabs with dropdowns

EXAMPLE

Home

Help

Dropdown ▾

```
<ul class="nav nav-tabs">
  ...
  <li class="dropdown">
    <a class="dropdown-toggle" data-toggle="dropdown" href="#">
      Dropdown <span class="caret"></span>
    </a>
    <ul class="dropdown-menu">
      ...
    </ul>
  </li>
  ...
</ul>
```

Pills with dropdowns

EXAMPLE

Home

Help

Dropdown ▾

```
<ul class="nav nav-pills">
  ...
  <li class="dropdown">
    <a class="dropdown-toggle" data-toggle="dropdown" href="#">
      Dropdown <span class="caret"></span>
    </a>
    <ul class="dropdown-menu">
      ...
    </ul>
  </li>
  ...
</ul>
```

Navbar

Default navbar

Navbars are responsive meta components that serve as navigation headers for your application or site. They begin collapsed (and toggleable) in mobile views and become horizontal as the available viewport width increases.

- Customize the collapsing point

Depending on the content in your navbar, you might need to change the point at which your navbar switches between collapsed and horizontal mode. Customize the `@grid-float-breakpoint` variable or add your own media query.
- Requires JavaScript

If JavaScript is disabled and the viewport is narrow enough that the navbar collapses, it will be impossible to expand the navbar.

and view the content within the `.navbar-collapse`.

EXAMPLE

```
<nav class="navbar navbar-default" role="navigation">
  <!-- Brand and toggle get grouped for better mobile display -->
  <div class="navbar-header">
    <button type="button" class="navbar-toggle" data-toggle="collapse" data-target="#bs-example-navbar-collapse-1">
      <span class="sr-only">Toggle navigation</span>
      <span class="icon-bar"></span>
      <span class="icon-bar"></span>
      <span class="icon-bar"></span>
    </button>
    <a class="navbar-brand" href="#">Brand</a>
  </div>

  <!-- Collect the nav links, forms, and other content for toggling -->
  <div class="collapse navbar-collapse" id="bs-example-navbar-collapse-1">
    <ul class="nav navbar-nav">
      <li class="active"><a href="#">Link</a></li>
      <li><a href="#">Link</a></li>
      <li class="dropdown">
        <a href="#" class="dropdown-toggle" data-toggle="dropdown">Dropdown <b class="caret"></b></a>
        <ul class="dropdown-menu">
          <li><a href="#">Action</a></li>
          <li><a href="#">Another action</a></li>
          <li><a href="#">Something else here</a></li>
          <li class="divider"></li>
          <li><a href="#">Separated link</a></li>
          <li class="divider"></li>
          <li><a href="#">One more separated link</a></li>
        </ul>
      </li>
    </ul>
    <form class="navbar-form navbar-left" role="search">
      <div class="form-group">
        <input type="text" class="form-control" placeholder="Search">
      </div>
      <button type="submit" class="btn btn-default">Submit</button>
    </form>
    <ul class="nav navbar-nav navbar-right">
      <li><a href="#">Link</a></li>
      <li class="dropdown">
        <a href="#" class="dropdown-toggle" data-toggle="dropdown">Dropdown <b class="caret"></b></a>
        <ul class="dropdown-menu">
          <li><a href="#">Action</a></li>
          <li><a href="#">Another action</a></li>
          <li><a href="#">Something else here</a></li>
          <li class="divider"></li>
          <li><a href="#">Separated link</a></li>
        </ul>
      </li>
    </ul>
  </div><!-- /.navbar-collapse -->
</nav>
```

Plugin dependency

The responsive navbar requires the collapse plugin (`./javascript/#collapse`) to be included in your version of Bootstrap.

Make navbars accessible

Be sure to add a `role="navigation"` to every navbar to help with accessibility.

Forms

Place form content within `.navbar-form` for proper vertical alignment and collapsed behavior in narrow viewports. Use the align options to decide where it resides within the navbar content.

As a heads up, `.navbar-form` shares much of its code with `.form-inline` via mixin.

EXAMPLE

```
<form class="navbar-form navbar-left" role="search">
  <div class="form-group">
    <input type="text" class="form-control" placeholder="Search">
  </div>
  <button type="submit" class="btn btn-default">Submit</button>
</form>
```

Always add labels

Screen readers will have trouble with your forms if you don't include a label for every input. For these inline navbar forms, you can hide the labels using the `.sr-only` class.

Buttons

Add the `.navbar-btn` class to `<button>` elements not residing in a `<form>` to vertically center them in the navbar.

EXAMPLE

```
<button type="button" class="btn btn-default navbar-btn">Sign in</button>
```

Context-specific usage

Like the standard button classes (`./css#buttons`), `.navbar-btn` can be used on `<a>` and `<input>` elements. However, neither `.navbar-btn` nor the standard button classes should be used on `<a>` elements within `.navbar-nav`.

Text

Wrap strings of text in an element with `.navbar-text`, usually on a `<p>` tag for proper leading and color.

EXAMPLE

```
<p class="navbar-text">Signed in as Mark Otto</p>
```

Non-nav links

For folks using standard links that are not within the regular navbar navigation component, use the `.navbar-link` class to add the proper colors for the default and inverse navbar options.

EXAMPLE

```
<p class="navbar-text navbar-right">Signed in as <a href="#" class="navbar-link">Mark Otto</a></p>
```

Component alignment

Align nav links, forms, buttons, or text, using the `.navbar-left` or `.navbar-right` utility classes. Both classes will add a CSS float in the specified direction. For example, to align nav links, put them in a separate `` with the respective utility class applied.

These classes are mixin-ed versions of `.pull-left` and `.pull-right`, but they're scoped to media queries for easier handling navbar components across device sizes.

Fixed to top

Add `.navbar-fixed-top`.

EXAMPLE

```
<nav class="navbar navbar-default navbar-fixed-top" role="navigation">
  ...
</nav>
```

Body padding required

The fixed navbar will overlay your other content, unless you add `padding` to the top of the `<body>`. Try out your own values using our snippet below. Tip: By default, the navbar is 50px high.

```
body { padding-top: 70px; }
```

Make sure to include this **after** the core Bootstrap CSS.

Fixed to bottom

Add `.navbar-fixed-bottom` instead.

EXAMPLE

```
<nav class="navbar navbar-default navbar-fixed-bottom" role="navigation">
  ...
</nav>
```

Body padding required

The fixed navbar will overlay your other content, unless you add `padding` to the bottom of the `<body>`. Try out your own values or use our snippet below. Tip: By default, the navbar is 50px high.

```
body { padding-bottom: 70px; }
```

Make sure to include this **after** the core Bootstrap CSS.

Static top

Create a full-width navbar that scrolls away with the page by adding `.navbar-static-top`. Unlike the `.navbar-fixed-*` class you do not need to change any padding on the `body`.

EXAMPLE

```
<nav class="navbar navbar-default navbar-static-top" role="navigation">
  ...
</nav>
```

Inverted navbar

Modify the look of the navbar by adding `.navbar-inverse`.

EXAMPLE

```
<nav class="navbar navbar-inverse" role="navigation">
  ...
</nav>
```

Breadcrumbs

Indicate the current page's location within a navigational hierarchy.

Separators are automatically added in CSS through `:before` and `content`.

EXAMPLE

Home

Home / Library

Home / Library / Data

```
<ol class="breadcrumb">
  <li><a href="#">Home</a></li>
  <li><a href="#">Library</a></li>
  <li class="active">Data</li>
</ol>
```

Pagination

Provide pagination links for your site or app with the multi-page pagination component, or simpler pager alternative.

Default pagination

Simple pagination inspired by Rdio, great for apps and search results. The large block is hard to miss, easily scalable, and provide large click areas.

EXAMPLE

```
<ul class="pagination">
  <li><a href="#">&laquo;</a></li>
  <li><a href="#">1</a></li>
  <li><a href="#">2</a></li>
  <li><a href="#">3</a></li>
  <li><a href="#">4</a></li>
  <li><a href="#">5</a></li>
  <li><a href="#">&raquo;</a></li>
</ul>
```

Disabled and active states

Links are customizable for different circumstances. Use `.disabled` for unclickable links and `.active` to indicate the current page.

EXAMPLE

```
<ul class="pagination">
  <li class="disabled"><a href="#">&laquo;</a></li>
  <li class="active"><a href="#">1 <span class="sr-only">(current)</span></a></li>
  ...
</ul>
```

You can optionally swap out active or disabled anchors for `` to remove click functionality while retaining intended styles.

```
<ul class="pagination">
  <li class="disabled"><span>&laquo;</span></li>
  <li class="active"><span>1 <span class="sr-only">(current)</span></span></li>
  ...
</ul>
```

Sizing

Fancy larger or smaller pagination? Add `.pagination-lg` or `.pagination-sm` for additional sizes.

EXAMPLE

«

1

2

3

4

5

»

«

1

2

3

4

5

»

```
<ul class="pagination pagination-lg">...</ul>
<ul class="pagination">...</ul>
<ul class="pagination pagination-sm">...</ul>
```

Pager

Quick previous and next links for simple pagination implementations with light markup and styles. It's great for simple sites like [blogs](#) and [magazines](#).

Default example

By default, the pager centers links.

EXAMPLE

Previous

Next

```
<ul class="pager">
  <li><a href="#">Previous</a></li>
  <li><a href="#">Next</a></li>
</ul>
```

Aligned links

Alternatively, you can align each link to the sides:

EXAMPLE

← Older

Newer →

```
<ul class="pager">
  <li class="previous"><a href="#">&larr; Older</a></li>
  <li class="next"><a href="#">Newer &rarr;</a></li>
</ul>
```

Optional disabled state

Pager links also use the general `.disabled` utility class from the pagination.

EXAMPLE

← Older

Newer →

```
<ul class="pager">
  <li class="previous disabled"><a href="#">&larr; Older</a></li>
  <li class="next"><a href="#">Newer &rarr;</a></li>
</ul>
```

Labels

Example

EXAMPLE

Example heading New

Example heading New

Example heading New

Example heading New

Example heading New

Example heading New

```
<h3>Example heading <span class="label label-default">New</span></h3>
```

Available variations

Add any of the below mentioned modifier classes to change the appearance of a label.

EXAMPLE

DefaultPrimarySuccessInfoWarningDanger

```
<span class="label label-default">Default</span>  
<span class="label label-primary">Primary</span>  
<span class="label label-success">Success</span>  
<span class="label label-info">Info</span>  
<span class="label label-warning">Warning</span>  
<span class="label label-danger">Danger</span>
```

Badges

Easily highlight new or unread items by adding a `` to links, Bootstrap navs, and more.

EXAMPLE

Inbox **42**

```
<a href="#">Inbox <span class="badge">42</span></a>
```

Self collapsing

When there are no new or unread items, badges will simply collapse (via CSS's `:empty` selector) provided no content exists with

Cross-browser compatibility

Badges won't self collapse in Internet Explorer 8 because it lacks support for the `:empty` selector.

Adapts to active nav states

Built-in styles are included for placing badges in active states in pill and list navigations.

EXAMPLE

Home **42** Profile Messages **3**

Home **42**

Profile

Messages

3

Messages 4

```
<ul class="nav nav-pills nav-stacked">
  <li class="active">
    <a href="#">
      <span class="badge pull-right">42</span>
      Home
    </a>
  </li>
  ...
</ul>
```

Jumbotron

A lightweight, flexible component that can optionally extend the entire viewport to showcase key content on your site.

EXAMPLE

Hello, world!

This is a simple hero unit, a simple jumbotron-style component for calling extra attention to featured content or information.

Learn more

```
<div class="jumbotron">
  <h1>Hello, world!</h1>
  <p>...</p>
  <p><a class="btn btn-primary btn-lg" role="button">Learn more</a></p>
</div>
```

To make the jumbotron full width, and without rounded corners, place it outside all `.container`s and instead add a `.container-fluid` within.

```
<div class="jumbotron">
  <div class="container">
    ...
  </div>
</div>
```

Page header

A simple shell for an `h1` to appropriately space out and segment sections of content on a page. It can utilize the `h1`'s default `sm` element, as well as most other components (with additional styles).

EXAMPLE

Example page header

Subtext for header

```
<div class="page-header">
  <h1>Example page header <small>Subtext for header</small></h1>
</div>
```

Thumbnails

Extend Bootstrap's grid system (`../css/#grid`) with the thumbnail component to easily display grids of images, videos, text, and more.

Default example

By default, Bootstrap's thumbnails are designed to showcase linked images with minimal required markup.

EXAMPLE

```
<div class="row">
  <div class="col-xs-6 col-md-3">
    <a href="#" class="thumbnail">
      
    </a>
  </div>
  ...
</div>
```

Custom content

With a bit of extra markup, it's possible to add any kind of HTML content like headings, paragraphs, or buttons into thumbnails.

EXAMPLE

in, egestas eget quam. Donec id elit non mi porta gravida at eget metus. Nullam id dolor id nibh ultricies vehicula ut id elit.

Button

Button

in, egestas eget quam. Donec id elit non mi porta gravida at eget metus. Nullam id dolor id nibh ultricies vehicula ut id elit.

Button

Button

in, egestas eget quam. Donec id elit non mi porta gravida at eget metus. Nullam id dolor id nibh ultricies vehicula ut id elit.

Button

Button

```
<div class="row">
  <div class="col-sm-6 col-md-4">
    <div class="thumbnail">
      
      <div class="caption">
        <h3>Thumbnail label</h3>
        <p>...</p>
        <p><a href="#" class="btn btn-primary" role="button">Button</a> <a href="#" class="btn btn-def
lt" role="button">Button</a></p>
      </div>
    </div>
  </div>
</div>
```

Alerts

Provide contextual feedback messages for typical user actions with the handful of available and flexible alert messages. For inline dismissal, use the alerts jQuery plugin ([../javascript/#alerts](#)).

Examples

Wrap any text and an optional dismiss button in `.alert` and one of the four contextual classes (e.g., `.alert-success`) for basic alert messages.

No default class

Alerts don't have default classes, only base and modifier classes. A default gray alert doesn't make too much sense, so you're required to specify a type via contextual class. Choose from success, info, warning, or danger.

EXAMPLE

Well done! You successfully read this important alert message.

Heads up! This alert needs your attention, but it's not super important.

Warning! Best check yo self, you're not looking too good.

Oh snap! Change a few things up and try submitting again.

```
<div class="alert alert-success">...</div>
<div class="alert alert-info">...</div>
<div class="alert alert-warning">...</div>
<div class="alert alert-danger">...</div>
```

Dismissable alerts

Build on any alert by adding an optional `.alert-dismissible` and close button.

EXAMPLE

Warning! Best check yo self, you're not looking too good.

```
<div class="alert alert-warning alert-dismissible">
  <button type="button" class="close" data-dismiss="alert" aria-hidden="true">&times;</button>
  <strong>Warning!</strong> Best check yo self, you're not looking too good.
</div>
```

Ensure proper behavior across all devices

Be sure to use the `<button>` element with the `data-dismiss="alert"` data attribute.

Links in alerts

Use the `.alert-link` utility class to quickly provide matching colored links within any alert.

EXAMPLE

Well done! You successfully read **this important alert message**.

Heads up! This **alert needs your attention**, but it's not super important.

Warning! Best check yo self, you're **not looking too good**.

Oh snap! **Change a few things up** and try submitting again.

```
<div class="alert alert-success">
  <a href="#" class="alert-link">...</a>
</div>
<div class="alert alert-info">
  <a href="#" class="alert-link">...</a>
</div>
<div class="alert alert-warning">
  <a href="#" class="alert-link">...</a>
</div>
<div class="alert alert-danger">
  <a href="#" class="alert-link">...</a>
</div>
```

Progress bars

Provide up-to-date feedback on the progress of a workflow or action with simple yet flexib progress bars.

Cross-browser compatibility

Progress bars use CSS3 transitions and animations to achieve some of their effects. These features are not supported in Internet Explorer 9 and below or older versions of Firefox. Opera 12 does not support animations.

Basic example

Default progress bar.

EXAMPLE

```
<div class="progress">
  <div class="progress-bar" role="progressbar" aria-valuenow="60" aria-valuemin="0" aria-valuemax="100" style="width: 60%;">
    <span class="sr-only">60% Complete</span>
  </div>
</div>
```

Contextual alternatives

Progress bars use some of the same button and alert classes for consistent styles.

EXAMPLE

```
<div class="progress">
  <div class="progress-bar progress-bar-success" role="progressbar" aria-valuenow="40" aria-valuemin="0" aria-valuemax="100" style="width: 40%;">
    <span class="sr-only">40% Complete (success)</span>
  </div>
</div>
<div class="progress">
  <div class="progress-bar progress-bar-info" role="progressbar" aria-valuenow="20" aria-valuemin="0" aria-valuemax="100" style="width: 20%;">
    <span class="sr-only">20% Complete</span>
  </div>
</div>
<div class="progress">
  <div class="progress-bar progress-bar-warning" role="progressbar" aria-valuenow="60" aria-valuemin="0" aria-valuemax="100" style="width: 60%;">
    <span class="sr-only">60% Complete (warning)</span>
  </div>
</div>
<div class="progress">
  <div class="progress-bar progress-bar-danger" role="progressbar" aria-valuenow="80" aria-valuemin="0" aria-valuemax="100" style="width: 80%;">
    <span class="sr-only">80% Complete</span>
  </div>
</div>
```

Striped

Uses a gradient to create a striped effect. Not available in IE8.

EXAMPLE

```
<div class="progress progress-striped">
  <div class="progress-bar progress-bar-success" role="progressbar" aria-valuenow="40" aria-valuemin="0" aria-valuemax="100" style="width: 40%;">
    <span class="sr-only">40% Complete (success)</span>
  </div>
</div>
<div class="progress progress-striped">
  <div class="progress-bar progress-bar-info" role="progressbar" aria-valuenow="20" aria-valuemin="0" aria-valuemax="100" style="width: 20%;">
    <span class="sr-only">20% Complete</span>
  </div>
</div>
```

```
<div class="progress progress-striped">
  <div class="progress-bar progress-bar-warning" role="progressbar" aria-valuenow="60" aria-valuemin="0"
    aria-valuemax="100" style="width: 60%">
    <span class="sr-only">60% Complete (warning)</span>
  </div>
</div>
<div class="progress progress-striped">
  <div class="progress-bar progress-bar-danger" role="progressbar" aria-valuenow="80" aria-valuemin="0"
    aria-valuemax="100" style="width: 80%">
    <span class="sr-only">80% Complete (danger)</span>
  </div>
</div>
```

Animated

Add `.active` to `.progress-striped` to animate the stripes right to left. Not available in all versions of IE.

EXAMPLE

```
<div class="progress progress-striped active">
  <div class="progress-bar" role="progressbar" aria-valuenow="45" aria-valuemin="0" aria-valuemax="100"
    style="width: 45%">
    <span class="sr-only">45% Complete</span>
  </div>
</div>
```

Stacked

Place multiple bars into the same `.progress` to stack them.

EXAMPLE

```
<div class="progress">
  <div class="progress-bar progress-bar-success" style="width: 35%">
    <span class="sr-only">35% Complete (success)</span>
  </div>
  <div class="progress-bar progress-bar-warning" style="width: 20%">
    <span class="sr-only">20% Complete (warning)</span>
  </div>
  <div class="progress-bar progress-bar-danger" style="width: 10%">
    <span class="sr-only">10% Complete (danger)</span>
  </div>
</div>
```

Media object

Abstract object styles for building various types of components (like blog comments, Tweets etc) that feature a left- or right-aligned image alongside textual content.

Default media

The default media allow to float a media object (images, video, audio) to the left or right of a content block.

EXAMPLE

Media heading
Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis. Fusce condimentum nunc ac nisi vulputate fringilla. Donec lacinia congue felis in faucibus.

Media heading
Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis. Fusce condimentum nunc ac nisi vulputate fringilla. Donec lacinia

congue felis in faucibus.

64x64

Nested media heading

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis. Fusce condimentum nunc ac nisi vulputate fringilla. Donec lacinia congue felis in faucibus.

```
<div class="media">
  <a class="pull-left" href="#">
    
  </a>
  <div class="media-body">
    <h4 class="media-heading">Media heading</h4>
    ...
  </div>
</div>
```

Media list

With a bit of extra markup, you can use media inside list (useful for comment threads or articles lists).

EXAMPLE

64x64

Media heading

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis.

64x64

Nested media heading

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis.

64x64

Nested media heading

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis.

64x64

Nested media heading

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis.

Media heading

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis.

64x64

```
<ul class="media-list">
  <li class="media">
    <a class="pull-left" href="#">
      
    </a>
    <div class="media-body">
      <h4 class="media-heading">Media heading</h4>
      ...
    </div>
  </li>
</ul>
```

List group

List groups are a flexible and powerful component for displaying not only simple lists of elements, but complex ones with custom content.

Basic example

The most basic list group is simply an unordered list with list items, and the proper classes. Build upon it with the options that follow your own CSS as needed.

EXAMPLE

Cras justo odio
Dapibus ac facilisis in
Morbi leo risus
Porta ac consectetur ac
Vestibulum at eros

```
<ul class="list-group">
  <li class="list-group-item">Cras justo odio</li>
  <li class="list-group-item">Dapibus ac facilisis in</li>
  <li class="list-group-item">Morbi leo risus</li>
  <li class="list-group-item">Porta ac consectetur ac</li>
  <li class="list-group-item">Vestibulum at eros</li>
</ul>
```

Badges

Add the badges component to any list group item and it will automatically be positioned on the right.

EXAMPLE

Cras justo odio	14
Dapibus ac facilisis in	2
Morbi leo risus	1

```
<ul class="list-group">
  <li class="list-group-item">
    <span class="badge">14</span>
    Cras justo odio
  </li>
</ul>
```

Linked items

Linkify list group items by using anchor tags instead of list items (that also means a parent `<div>` instead of an ``). No need for individual parents around each element.

EXAMPLE

Cras justo odio
Dapibus ac facilisis in
Morbi leo risus
Porta ac consectetur ac
Vestibulum at eros

```
<div class="list-group">
  <a href="#" class="list-group-item active">
    Cras justo odio
  </a>
  <a href="#" class="list-group-item">Dapibus ac facilisis in</a>
  <a href="#" class="list-group-item">Morbi leo risus</a>
  <a href="#" class="list-group-item">Porta ac consectetur ac</a>
  <a href="#" class="list-group-item">Vestibulum at eros</a>
</div>
```

Custom content

Add nearly any HTML within, even for linked list groups like the one below.

EXAMPLE

List group item heading
Donec id elit non mi porta gravida at eget metus.
Maecenas sed diam eget risus varius blandit.

List group item heading
Donec id elit non mi porta gravida at eget metus.
Maecenas sed diam eget risus varius blandit.

List group item heading
Donec id elit non mi porta gravida at eget metus.
Maecenas sed diam eget risus varius blandit.

```
<div class="list-group">
  <a href="#" class="list-group-item active">
    <h4 class="list-group-item-heading">List group item heading</h4>
    <p class="list-group-item-text">...</p>
  </a>
</div>
```

Panels

While not always necessary, sometimes you need to put your DOM in a box. For those situations, try the panel component.

Basic example

By default, all the `.panel` does is apply some basic border and padding to contain some content.

EXAMPLE

Basic panel example

```
<div class="panel panel-default">
  <div class="panel-body">
    Basic panel example
  </div>
</div>
```

Panel with heading

Easily add a heading container to your panel with `.panel-heading`. You may also include any `<h1>` - `<h6>` with a `.panel-title` class to add a pre-styled heading.

EXAMPLE

Panel heading without title

Panel content

Panel title

Panel content

```
<div class="panel panel-default">
  <div class="panel-heading">Panel heading without title</div>
  <div class="panel-body">
    Panel content
  </div>
</div>
```

```
<div class="panel panel-default">
  <div class="panel-heading">
    <h3 class="panel-title">Panel title</h3>
  </div>
  <div class="panel-body">
    Panel content
  </div>
</div>
```

Panel with footer

Wrap buttons or secondary text in `.panel-footer`. Note that panel footers **do not** inherit colors and borders when using context variations as they are not meant to be in the foreground.

EXAMPLE

Panel content

Panel footer

```
<div class="panel panel-default">
  <div class="panel-body">
    Panel content
  </div>
  <div class="panel-footer">Panel footer</div>
</div>
```

Contextual alternatives

Like other components, easily make a panel more meaningful to a particular context by adding any of the contextual state classes

EXAMPLE

Panel title

Panel content

Panel title

Panel content

Panel title

Panel content

Panel title

Panel content

Panel title

Panel content

```
<div class="panel panel-primary">...</div>
<div class="panel panel-success">...</div>
<div class="panel panel-info">...</div>
<div class="panel panel-warning">...</div>
<div class="panel panel-danger">...</div>
```

With tables

Add any non-bordered `.table` within a panel for a seamless design. If there is a `.panel-body`, we add an extra border to the top of the table for separation.

EXAMPLE

Panel heading

Some default panel content here. Nulla vitae elit libero, a pharetra augue. Aenean lacinia bibendum nulla sed consectetur. Aenean eu leo quam. Pellentesque ornare sem lacinia quam venenatis vestibulum. Nullam id dolor id nibh ultricies vehicula ut id elit.

#	First Name	Last Name	Username
1	Mark	Otto	@mdo
2	Jacob	Thornton	@fat
3	Larry	the Bird	@twitter

```
<div class="panel panel-default">
  <!-- Default panel contents -->
  <div class="panel-heading">Panel heading</div>
  <div class="panel-body">
    <p>...</p>
  </div>

  <!-- Table -->
  <table class="table">
    ...
  </table>
</div>
```

If there is no panel body, the component moves from panel header to table without interruption.

EXAMPLE

Panel heading

#	First Name	Last Name	Username
1	Mark	Otto	@mdo
2	Jacob	Thornton	@fat
3	Larry	the Bird	@twitter

```
<div class="panel panel-default">
  <!-- Default panel contents -->
  <div class="panel-heading">Panel heading</div>

  <!-- Table -->
  <table class="table">
    ...
  </table>
</div>
```

With list groups

Easily include full-width list groups within any panel.

EXAMPLE

Panel heading

Cras justo odio

Dapibus ac facilisis in

Morbi leo risus

Porta ac consectetur ac

Vestibulum at eros

```
<div class="panel panel-default">
  <!-- Default panel contents -->
  <div class="panel-heading">Panel heading</div>
  <div class="panel-body">
    <p>...</p>
  </div>

  <!-- List group -->
  <ul class="list-group">
    <li class="list-group-item">Cras justo odio</li>
    <li class="list-group-item">Dapibus ac facilisis in</li>
    <li class="list-group-item">Morbi leo risus</li>
    <li class="list-group-item">Porta ac consectetur ac</li>
    <li class="list-group-item">Vestibulum at eros</li>
  </ul>
</div>
```

Wells

Default well

Use the well as a simple effect on an element to give it an inset effect.

EXAMPLE

Look, I'm in a well!

```
<div class="well">...</div>
```

Optional classes

Control padding and rounded corners with two optional modifier classes.

EXAMPLE

Look, I'm in a large well!

```
<div class="well well-lg">...</div>
```

EXAMPLE

Look, I'm in a small well!

```
<div class="well well-sm">...</div>
```
